

WhatsUp Gold v15: Upgrade Today

Capability	So What...
NEW Integrated Layer 2 discovery and mapping (WhatsConnected)	Efficiently prevent, detect, and respond quickly to system outages, guided by visibility into where system devices are on your network
NEW Task-oriented Web UI	Shorten remediation time with fewer clicks-to-action and faster (30 times faster) page loads
NEW Link WUG groups to Active Directory	STOP recreating user roles - manage all users, credentials and permissions in one single place
NEW FIPS 140-2 encryption and validation (Flow Monitor & WhatsVirtual)	Protect your network management data with the strongest algorithms commercially available
NEW Headless Installer	Gain complete deployment flexibility wherever you are and leverage existing software delivery investments.
NEW Simplified password recovery	Reset user's passwords from within WUG
NEW Absolute-value interface reports	Visualize interface performance data in a way that best suits you
NEW WhatsUp Gold DB rename	Utilize a single database service to support multiple WUG installations - scale effortlessly
NEW Gauges	Determine performance issues more quickly and report those issues to the right personnel

The Evolution of WhatsUp Gold

WhatsUp Gold is a complete IT Management Solution, simple to install and easy to use, that lets you discover and manage your network, server, applications, virtual resources, configuration settings, network traffic, and events for security and compliance reasons in a matter of minutes, all from a **SINGLE** console.
