

# Flowmon and WhatsUp Gold

Integrated Infrastructure Monitoring, Network Performance and Anomaly Detection

DATA SHEET

## KEY BENEFITS

- ✓ **Know Everything**  
Broad IT monitoring, combined with in-depth flow analysis, joined to deliver maximum transparency
- ✓ **Enhance Security**  
Analyze encrypted traffic, detect ransomware & insider threats, unusual behavior as well as monitor firewalls, virus scanners, and backups
- ✓ **High Availability Monitoring**  
Monitor Flowmon devices with WhatsUp Gold along with the rest of your network

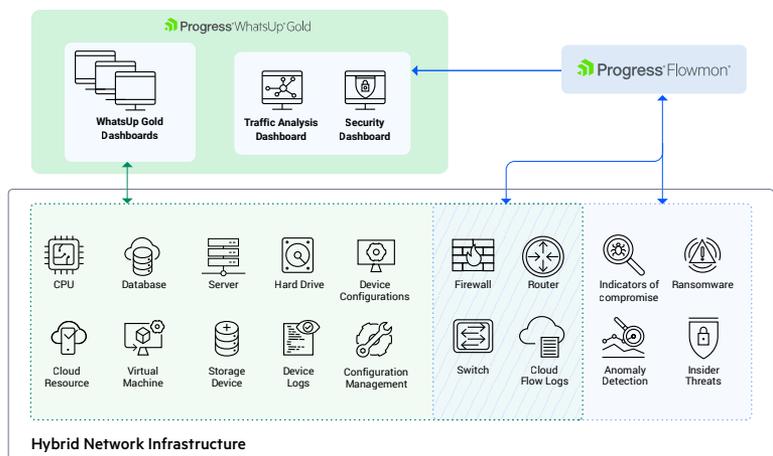

## Troubleshooting Challenges

Your network is a complex and constantly-changing collection of devices and systems and it absolutely must be available at all time. But when issues do occur, it's hard to troubleshoot them using multiple tools. Using one solution for infrastructure and another one for network traffic analysis and yet another for security event detection and response leads to fingerprinting, manual comparisons and delay. In fact, studies have shown that the more tools an IT team needs to diagnose a problem, the worse their performance becomes.

The problem is not seeing everything you need in one application. To diagnose network issues you should have observability into IT infrastructure, advanced network traffic analysis, application performance, virtual machines, wireless devices, cloud resources, device logs, device configurations and security threat detection & response. This will save time, improve efficiency and dramatically reduce your Mean Time to Resolution (MTTR).

## The Data You Need, in Context

Flowmon and WhatsUp Gold bring together network telemetry, AI-powered analysis, and advanced security features with comprehensive IT infrastructure monitoring capabilities ensuring the availability, performance, and security of your entire network.

## ABOUT WHATSUP GOLD

WhatsUp Gold is the perennial favorite network and infrastructure monitoring choice of tens of thousands of IT professionals. It provides complete visibility into the status and performance of applications, network devices and servers in the cloud or on-premises. WhatsUp Gold makes it easy to proactively find and fix problems fast – usually before they impact end-users.

With its unique interactive mapping interface, WhatsUp Gold provides intuitive, at-a-glance network observability with industry-leading ease-of-use. Sophisticated alerting and reporting capabilities make it simple for IT teams to monitor network devices, servers, virtual machines, cloud, and wireless environments in context so they can diagnose issues with pinpoint accuracy.

## ABOUT FLOWMON

The Flowmon solution creates a secure and transparent digital environment where people rule the network regardless of its complexity and nature. Using machine learning, heuristics and advanced analytics, it enables IT professionals to improve performance and reduce risk across on-premise, datacenter and cloud environments.

The solution serves as a shared platform where network and security teams speak the same language, enabling them to work as one for faster mean-time-to-resolve and optimal resource allocation. By delivering highly streamlined deployment to any network type, market-leading support and in-product guidance, the solution provides the fastest time-to-value in the industry.

WhatsUp Gold provides complete visibility into the status and performance of applications, network devices and servers in the cloud or on-premises. Its unique interactive mapping interface makes it easy to see network issues at a glance and diagnose them with a few clicks. Sophisticated alerting and reporting lets you proactively find and fix network problems fast – usually before they impact your end users.

Flowmon monitors and analyzes network and cloud traffic, detecting anomalies using a spectrum of methods all deployed simultaneously. It combines network telemetry, machine learning and behavior analysis seeking indicators of compromise to uncover malicious behaviors or data breaches.

Together, you get the integration of IT infrastructure/network monitoring and network performance monitoring and diagnostics/network detection and response so you can see everything going on in your network in context. Flowmon dashboards displaying advanced traffic analysis and security details can be viewed natively within the WhatsUp Gold interface, giving IT teams a single tool for troubleshooting and diagnostics.

## Reliable, Secure, Observable Networks

Integrating WhatsUp Gold and Flowmon combines active and passive security, creates another level of awareness and makes your entire network environment more observable, reliable, and secure.

## About Progress

Dedicated to propelling business forward in a technology-driven world, Progress (Nasdaq: PRGS) helps businesses drive faster cycles of innovation, fuel momentum and accelerate their path to success. As the trusted provider of the best products to develop, deploy and manage high-impact applications, Progress enables customers to develop the applications and experiences they need, deploy where and how they want and manage it all safely and securely. Hundreds of thousands of enterprises, including 1,700 software companies and 3.5 million developers, depend on [Progress](http://www.progress.com) to achieve their goals—with confidence. Learn more at [www.progress.com](http://www.progress.com), and follow us on [LinkedIn](#), [YouTube](#), [Twitter](#), [Facebook](#) and [Instagram](#).
