

Unified Network and Security Intelligence

Observe. Detect. Respond.

DATA SHEET

Why Enterprises Are Moving to a Unified Model

Fragmented monitoring creates real business risk:

- Siloed tools lead to **missed signals** and delayed detection
- Teams spend **time correlating data** instead of resolving issues
- Security and performance events are **disconnected** but interdependent

WhatsUp Gold brings these worlds together.

A single platform correlates infrastructure health, network behavior, and security insights—allowing teams to **identify root cause faster and act with confidence.**

Modern IT environments are no longer just about uptime—they demand **performance, visibility, and security working together.** Yet most organizations still rely on disconnected tools, creating blind spots, slower response, and higher risk. **WhatsUp Gold changes that.**

A Unified Approach to IT Operations & Security

WhatsUp Gold delivers IT Infrastructure Monitoring (ITIM), Network Performance Monitoring (NPM), and Network Detection & Response (NDR)—combined in a single, integrated platform.

Instead of managing separate tools and fragmented insights, your teams gain one operational view across infrastructure, performance, and security.

- ITIM** – Real-time visibility across servers, devices, applications, and cloud resources
- NPM** – Deep traffic analytics to optimize performance and user experience
- NDR** – AI-powered detection of anomalous and malicious activity

The result: faster decisions, fewer blind spots, and coordinated response across teams.

What This Means for Your Business

1. Faster Detection & Resolution

- Identify issues before users are impacted
- Move from alert → root cause in minutes, not hours

2. Improved Uptime & Performance

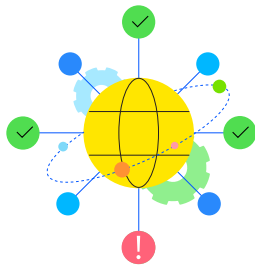

- Proactively detect failures and bottlenecks
- Optimize application and network performance end-to-end

3. Stronger Security Posture

- Detect advanced threats using AI-driven behavioral analytics
- Investigate and respond with full operational context

4. Reduced Tool Sprawl & Complexity

- Replace multiple point solutions with a single pane of glass
- Eliminate manual correlation and duplicate workflows

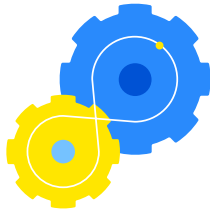

Built for Hybrid Enterprise Environments

WhatsUp Gold delivers **complete visibility** across:

- On-premises infrastructure
- Cloud and hybrid environments
- East-west and north-south network traffic

With a unified platform, teams can answer three critical questions in real time:

- **Is everything up?**
- **Are users impacted?**
- **Is this a performance issue or a security threat?**

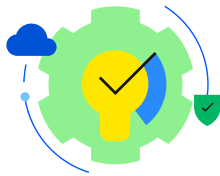

The Shift: From Reactive to Proactive Operations

Traditional IT:

- Reactive troubleshooting
- Siloed teams and tools
- Slow investigation cycles

With WhatsUp Gold:

- Coordinated, cross-domain visibility
- AI-powered detection and analysis
- Proactive workflows that protect uptime and security simultaneously

Why WhatsUp Gold

One platform. Complete visibility. Confident action.

- Unified ITIM + NPM + NDR in a single solution
- AI-powered insights to reduce noise and accelerate decisions
- Designed for enterprise scale without operational complexity
- Built to align IT Ops and Security teams

About Progress Software

Progress Software (Nasdaq: PRGS) empowers organizations to achieve transformational success in the face of disruptive change. Our software enables our customers to develop, deploy and manage responsible AI-powered applications and personalized digital experiences with agility and ease. Businesses of all sizes get a trusted provider in Progress, with the products, expertise and vision they need to turn AI disruption into a competitive advantage. Millions of developers and technologists at hundreds of thousands of organizations depend on Progress every day. Learn more at www.progress.com
